

Products and services

1. Consultancy

we can help you identify opportunities created for your organization by new technologies, and create applications to exploit them

2. Web services

Computable Functions are experienced developers of applications based on web services. For example, we have developed a Python interface to the services of betfair.com used to implement real-time betting market trading applications.

3. Risk-E

Risk-E is a program developed by Computable Functions with [CMR Group](#) to evaluate the exposure of survey results to sampling errors. Risk-E is one of the first applications to bring the statistical procedure of resampling to end-users.

4. Prediction markets

[BetPoll](#) illustrates the use of betting markets as forecasting instruments by republishing market prices as forecasts embodying interactive graphics. BetPoll was applied to the 2005 UK General Election.
